Reflection

I studied the YouTube link that our educator has posted today and I managed to finish it the same day. It's hard and it appears to be that I'm simply copying the code from the video yet I actually give my best to comprehend and break down the codes. I added the splash screen that I have gained from the past module. I completed this task even before the conference lesson since tomorrow, February 23, is my birthday and I don't have a lot of time tomorrow. I hope I will get again an ideal score for this activity and an Uno grade for the last grade.
